Timeless Knowledge

The 16th Virtual Design World Cup 2026

Introdution

Timeless Knowledge reimagines Milan's Città Studi as a place where historic architecture and new ideas grow together. An automated library helps visitors find and receive books quickly. Capsule vehicles connect destinations across the district, transforming into compact spheres to travel through an elevated tube network. Along the route, an observation deck offers a new view of the city. Fen-Z, a personal AI companion, learns each owner's interests and helps bring people together. Through learning, mobility, and shared experiences, Timeless Knowledge connects Milan's past with its future.

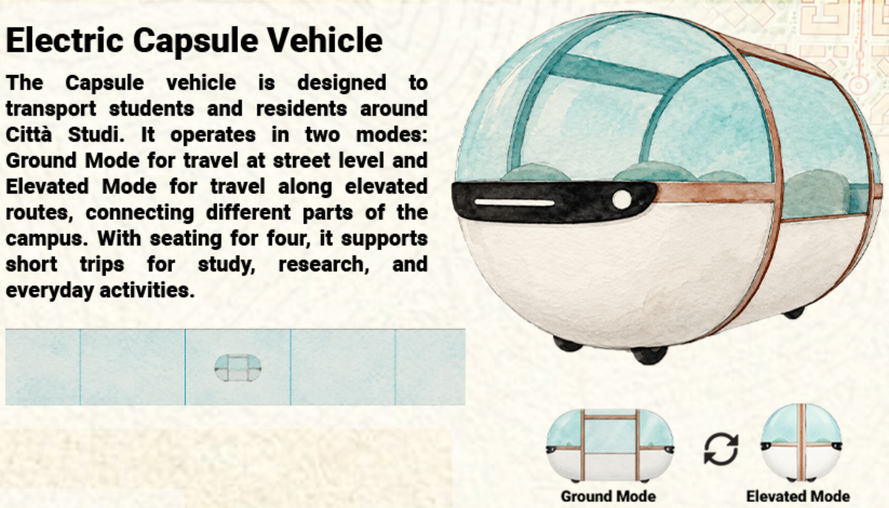

The Smart Library

The Smart Library is a compact study space enclosed by glass, with private seating pods. Users enter a book title on the search screen, and an automated system retrieves it from the circular storage unit overhead. Solar panels generate electricity, while stored energy keeps the library operating when sunlight is unavailable

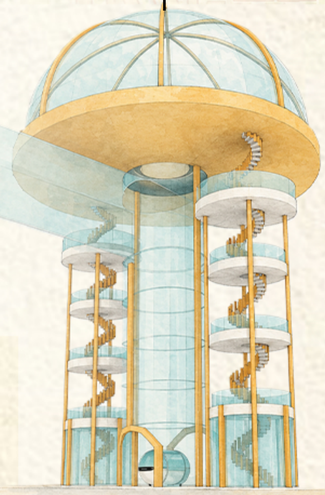

Electric Capsule Vehicle

The Capsule vehicle is designed to transport students and residents around Città Studi. It operates in two modes: Ground Mode for travel at street level and Elevated Mode for travel along elevated routes, connecting different parts of the campus. With seating for four, it supports short trips for study, research, and everyday activities.

Skyline Capsule Station

Skyline Capsule Station is an elevated observation tower integrated with a capsule transit route. Beneath its glass dome, visitors can enjoy panoramic views of the district and explore a scale model of its future development. A connected transit tube carries capsule vehicles through the station, bringing sightseeing and mobility together in one place.

Fen-Z

Fen-Z is an AI-powered companion robot personalized to its owner's habits and needs. Available in a range of colors, each FenZ has its own personality, expressed through its animated LED face. It helps people communicate, share information, and connect with others who have similar interests.
